**Images in Ophthalmic Plastic and Reconstructive Surgery**

Clinical images are a vital part of diagnosis and management in the spectrum of Ophthalmic Plastic and Reconstructive Surgery. Many of these clinical images are striking and convey a sense of awe of the diversity that encompasses our unique subspecialty, however, many go unpublished. In this regard, we have created a new submission category, entitled OPRS Images.

Only high-quality, original, unpublished images will be considered for publication. External and slit lamp photographs, radiographic imaging, and short video segments will be considered but must include a high-resolution still image with any video submission. OPRS Images will appear in electronic version of the journal. Accepted submissions will be indexed through medline in the same manner as with other OPRS submissions.

**PREPARING YOUR SUBMISSION TO OPRS Images:**

A maximum of 2 figures will be accepted. If applicable, multiple panels can be created and each should be labeled Panel A, Panel B, etc.

**Resolution: The minimum requirements for resolution are:**

- 1200 DPI/PPI for monochrome. For purely black and white images.
- 300 DPI/PPI for halftones (CMYK/grayscale). For color or black-and-white images containing pictures only, including photographs not containing text labeling or thin lines.
- 600 DPI/PPI for combination halftones (CMYK/grayscale). For color or black-and-white images containing pictures and text labeling and/or thin lines.

Lower resolutions may compromise print quality; higher resolutions will not improve output quality and will only increase file size.

**Color Mode.** Color images must be submitted in CMYK (cyan, magenta, yellow, black) mode, not RGB (red, green, blue) mode. Radiographs should be submitted in grayscale mode. Black-and-white line art can be submitted in grayscale or bitmap mode.

**Cropping and sizing.** All graphics should be submitted at their actual size; that is, they should be 100% of their print dimensions so that no scaling is necessary. Images should fit a column width of 3.5 inches. Crop figures (or change the page size of your document) so that no unnecessary white space is left bordering the figure.
A title should be included with the submission and contain less than twelve words. A maximum of four authors may be listed. Please provide the name, highest academic degree, address, e-mail address, telephone number, and fax number of each author.

The submitted OPRS Images submission should only contain a figure legend with less than 250 words, present relevant clinical information, clearly describe the image with attention to any arrows or labeling and not include any references. For an image with multiple panels, separate descriptions should be noted to call out individual panels.

PHOTOGRAPHS OF PATIENTS
If identifiable patient information is present, please obtain a release from the patient prior to submission.
